## DOMAINS OF FUNCTION ASSESSED IN A NEUROPSYCHOLOGICAL EVALUATION

Neuropsychological evaluation is a comprehensive assessment of thinking, behavior, and emotional functioning. It helps us understand how brain function impacts daily life and guides diagnosis, treatment, and recommendations.

\* These areas of challenge have been commonly reported in individuals with PKU.

This comprehensive approach helps identify which cognitive, emotional, and behavioral functions are strengths or areas of difficulty, how they impact daily life, and what strategies or supports will be most helpful.

Note: Tests used may vary based on age, cultural background, referral question, and presenting concerns.
