# Smarter Nutrition Assessment with Photography

## Research opportunity for PKU patients

A new study comparing two methods of measuring what people with phenylketonuria (PKU) eat is being conducted at OHSU. You may be eligible to participate if you are a patient aged 16+ years diagnosed with PKU.

The purpose of the study is to test a new method called Smarter Nutrition Assessment with Photography (or SNAP). SNAP uses meal photos taken with your smartphone, combined with brief interviews with a dietitian, to measure your diet. We will compare the diet analysis from SNAP versus a paper 3-day diet diary and see which is closer to the predicted amount of Calories you burn in a day.

Participation in this study will last about 4 weeks. All visits take place remotely. There is no cost to you or your insurance company for taking part in this study. You will be compensated up to $50 for your participation.

This study is funded by Biomarin Pharmaceuticals

eIRB# 29341
